

How much does an off-grid solar-powered containerized solar panel cost in the US

Overview

How much does an on-grid solar system cost?

On-grid systems are built to support energy needs but do not serve as your only electricity source. This means they're smaller and cost less than off-grid options. The average cost of solar panels for an on-grid, 5 kilowatt-hour (kWh) system is \$15,000-\$20,000. An off-grid system costs more than twice as much.

How much do off-grid solar systems cost in 2025?

The average cost of installing an off-grid solar system to your home is \$51,000, but the cost typically varies from \$32,500 to \$69,500. Green energy solutions are more than a passing trend, and off-grid solar systems are available anywhere you find the sun.

Does an off-grid solar system work with a large home?

Yes, off-grid systems work with any residential home, even larger ones. Off-grid systems work best for remote homes or those with limited access to utility power. Due to their size and power capacity, off-grid systems are more expensive than grid-tied solar systems.

How much does a solar battery system cost?

Battery storage systems have high upfront costs, but they store collected solar energy, so you can power your home when your solar panels cannot produce energy or during a power outage. These advanced solar battery systems typically cost between \$4,000 to \$19,350, depending on battery chemistry.

Most off-grid solar installations fall into the \$32,500 to \$69,500 range, but many factors can impact your total costs. A small, 2-kilowatt system installed in a very sunny climate can cost as little as \$18,000,

while a large, 20-kilowatt installation can set you back as much as \$100,000. See more on [roofgnome directsolarpower](#)
