

How much electricity does household energy storage use

Overview

How much energy does a home use?

Unlike natural gas, petroleum fuels, and wood, which are used mostly for heating and cooking in U.S. homes, electricity can power well over 100 energy end uses for households. Lighting and refrigerators are used in nearly every home, and they are the next two largest electricity end uses.

What are the benefits of a home energy storage unit?

1. Enhanced Energy Security: A home energy storage unit can provide a backup power supply during outages, ensuring that homes remain powered without any interruptions. This is particularly useful in areas prone to natural disasters or places with an unreliable grid infrastructure.

How many kWh does a home use per day?

According to the U.S. Energy Information Administration, the median American home used about 10,500 kWh in 2023—approximately 29 kWh per day¹. Your actual usage will vary based on your region, home size, and level of electrification (e.g., EVs, heat pumps, induction cooking).

How much electricity does a household use a year?

In the US typical household power consumption is about 10,178 kWh each year, in France it is 6,400 kWh, in the UK it is 4,600 kWh and in China around 1,300 kWh. The global average electricity consumption for households with electricity was roughly 3,500 kWh in 2010.
