

How much is the electricity cost for Singapore s solar container communication stations

Overview

What is the uniform Singapore Energy price (Usep)?

The Uniform Singapore Energy Price (USEP) is the half-hourly energy price in the Singapore Wholesale Electricity Market. Energy withdrawal from the national grid is settled at the USEP. Since 2022, various measures were introduced to enhance Singapore's energy security and resilience.

How is electricity produced in Singapore?

In Singapore, electricity is produced using mainly imported natural gas which is tied to oil prices by commercial contracts. This practice is similar to that practised in other markets in Asia for natural gas contracts. This component reflects the cost of generating and delivering electricity to consumers. It includes the following cost components:

How are electricity tariffs regulated in Singapore?

Electricity tariffs are regulated by the Energy Market Authority (EMA) of Singapore and revised quarterly to reflect the actual cost of electricity. SP Services buys electricity on behalf of customers and pays the generation companies, transmission licensee and other market players based on the rates of the cost components as approved by EMA.

Why are Singapore solar prices still low in 2025?

USEP prices in Singapore remain low in 2025 due to EMA's stabilisation measures, which limit volatility and cap price spikes. For solar homeowners on OEM and ECIS, this means lower and more unpredictable export earnings. Switching to SP Group's regulated tariff offers more stable bills and predictable solar rebates in today's low-USEP environment.
