

How often does the Austrian energy storage power station charge and discharge

Overview

How does hydropower work in Austria?

In Austria, hydropower is one of the most widely used means of generating electricity. Run-of-river power stations produce power around the clock, while pumped storage power stations store the energy and supply electricity to consumers as required.

Why do we need a high-efficiency storage facility in Austria?

Above all, we need to build high-efficiency storage facilities and expand our networks. Hydropower plants account for more than 60% of the electricity produced in Austria. Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production.

How does Austria use electricity?

Austria is connected to neighbouring countries via the European electricity system. Depending on the current market situation, Austria either imports or exports electricity. On average, renewables account for 45.3% (as of 2023) in gross electricity consumption across the EU. Targeting 100% renewable electricity.

What if Austria didn't have electricity?

Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production. Austria's last coal-fired power plant closed back in 2020. Without electricity, modern-day life would grind to a halt.
