

Impact resistance of solar panel glass

Overview

Why do solar panels have tempered cover glass?

The minimal thickness of AGC's tempered cover glass also contributes to the overall efficiency of solar panel systems. The thinner glass allows more sunlight to reach the photovoltaic cells, increasing the panels' energy conversion efficiency.

Can tempered glass be used in solar modules?

The only feasible way for tempered glass to be widely used in solar modules is its application in single-glass modules. The prevailing benchmark for hail resistance, which stipulates that solar modules must be capable of withstanding impacts from hailstones up to 35mm in diameter, may fall short in areas frequently subjected to larger hailstones.

What is hail-resistant tempered solar panel cover glass?

AGC's hail-resistant tempered cover glass is designed to protect your solar panels from damage, ensuring they continue to generate clean, renewable energy for years to come. Contact AGC today to learn more about how our hail-resistant tempered solar panel cover glass can enhance the lifespan and efficiency of your solar panels.

Can glass to backsheets PV modules withstand hail damage?

Power reduction of 21.47% is observed in glass to backsheets PV modules under hail. PV modules with front glass thickness of 4 mm can withstand severe hail damage. Use low wet-leakage current resistance modules for high hail-prone regions. PV modules with glass to backsheets design are suitable for high hail-prone regions.
