

Installation of solar modules on tiled sloping roofs

Overview

How do you install solar panels on a tile roof?

To install solar panels on a tile roof, solar installers attach solar racks by taking out individual tiles and cutting or drilling small holes in them. Alternatively, they place similarly shaped tiles in between the rows of panels to maintain a neat appearance.

Can solar panels be installed on a sloped roof?

A roof with a slope that faces south is optimal for the installation of solar panels, but the roof structure on some homes may not be structurally sound enough to support a solar array. The installer may need to modify the roof or install the panels on a freestanding ground unit rather than on the roof.

Can solar panels be installed on clay-tiled roofs?

Until recently, installing solar on clay-tiled roofs has been a more expensive and risky endeavor than other roof types, like composite shingle or metal. This is because tiles are relatively expensive, fragile, and removing them to install roof mounts for solar panels can open up the seal of your roof to water damage.

Can a tile roof handle solar panels?

If you have a tile roof and are considering solar energy, you might be wondering whether your roof can handle solar panels. Tile roofs—especially lightweight cement or clay tiles—are beautiful and durable but also delicate. Unlike asphalt shingles, they can crack easily under pressure, which makes solar installation a bit more challenging.
