

Iran Gravity Energy Storage Tower Project

Overview

Can gravity-based energy storage make tall buildings more resilient?

In partnership with the company Energy Vault, SOM is designing and engineering the next generation of gravity-based energy storage systems—a technology with the potential to make renewable energy grids more resilient and achieve record carbon paybacks in tall buildings.

Why is gravity the future of energy storage?

As the world generates more electricity from renewable energy sources, there is growing demand for technologies which can store excess energy produced and release it on demand. Gravitricity develops innovative, long duration underground storage technologies that deliver flexible, low-cost solutions for energy storage.

Can gravity energy storage systems be built anywhere?

unlike pumped hydro, the gravity system can be built almost anywhere because it just uses gravity SOM and Energy Vault believe this can lead to storing clean energy from solar and wind power project info: name: Gravity energy storage systems (GESS) architecture firm: Skidmore, Owings & Merrill (SOM) company: Energy Vault.

Will Energy Vault transform tall buildings into 'Big batteries'?

In May 2024, Energy Vault, a company specializing in grid-scale energy storage, announced a global partnership with Skidmore, Owings & Merrill (SOM) to transform tall buildings and superstructures into 'big batteries' using the technology called gravity energy storage systems (GESS).
