

Irish home energy storage exports

Overview

What is energy storage Ireland (ESI)?

Energy Storage Ireland (ESI) is a representative association for those interested and active in the development of energy storage in Ireland and Northern Ireland.

Could energy storage transform Ireland's energy system?

If this pipeline was built out, the report states that Ireland could capture all of that wasted energy, further reducing our reliance on fossil fuels, and driving down energy costs for consumers. "Energy storage solutions can transform our electricity system for the better," said Bobby Smith, head of Energy Storage Ireland.

Does Ireland need more energy storage?

This study documents industry perspectives from Ireland, a country which requires a significant increase in the development of energy storage due to security of supply concerns, its isolation from Europe's central transmission network and its reliance on wind energy as a primary intermittent renewable energy resource.

When will long duration energy storage be available in Ireland?

The Irish Electricity Storage Policy Framework, published after this data was collected, indicates that an immediate route to market for 500 MW of long duration energy storage is currently being developed, with further studies planned to support long duration storage from 2030 to 2040 (Government Of Ireland 2024a).
