

Is it cost-effective to install solar panels at home

Overview

Is it worth installing solar panels on Your House?

The growth of photovoltaic self-consumption seems unstoppable, but many people still wonder whether it is worth installing solar panels on their house. The answer is yes, and we will explain why. The sun is an unchanging and inexhaustible source of energy. Just 6% of the sun's energy would be enough to meet the energy needs of the entire planet.

How much does it cost to install solar panels?

The up-front cost to install solar panels has fallen significantly over the years, but it isn't cheap. The average U.S. homeowner requires an 11-kilowatt solar panel system to cover their electricity usage. For a system that size, you can expect to spend just over \$22,000 in 2024, after federal tax credits.

How much does a home solar system cost?

According to studies by the U.S. Department of Energy, the all-in cost of a home solar panel system is between \$2.74 to \$3.30 per watt. ^{1,2,12} This figure includes the solar panels, the installation, and other expenses. Using these numbers, an average-sized 8-kilowatt residential solar system would cost between \$21,900 - \$26,400.

Is a home solar energy system a good option?

A home solar energy system is one of the most popular and efficient alternatives to traditional power sources. Solar panels have many environmental benefits and can save homeowners money over the long term. While costs have decreased recently, installing and maintaining solar panels can still be expensive.
