

Is it good to install solar panels for home use

Overview

Are solar panels a good choice for your home?

Homes that have energy usage in excess of 500 kilowatt hours (kWH) per month are usually excellent candidates for solar panels. If the solar panel system produces excess energy, or more energy than the home uses, homeowners can sell the extra energy output to the local utility company each month.

Is a home solar energy system a good option?

A home solar energy system is one of the most popular and efficient alternatives to traditional power sources. Solar panels have many environmental benefits and can save homeowners money over the long term. While costs have decreased recently, installing and maintaining solar panels can still be expensive.

Are solar panels a good option for home improvement projects?

As with any home improvement project, there are benefits and drawbacks to installing solar panels. Pros: The energy produced by your solar system is free, and if your utility uses net metering, it credits you for any excess electricity that is added to the grid, helping you to break even more quickly on the project's cost.

Should you install solar panels on your roof?

Using an irradiance map can help determine how much sunlight a roof receives, and that data can be used by homeowners to discover if it's worth installing solar panels. Homes located in states with little to no rain or cloud cover—and without a lot of shade covering the roof—are prime candidates for solar panels.
