

Is it useful to install solar panels on the north side of the house

Overview

Should solar be installed on a south facing roof?

Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense. That's because a north facing solar system typically produces about 56% of the output of a south facing system.

Are north facing solar panels worth the money?

With electricity prices rising, north facing solar panels are now often worth the money. Long ago, when the year was 2010, electricity was cheaper than it is now and solar panels were way more expensive. Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense.

Can solar panels be installed on the side of a house?

Solar panels can be installed on the side of a house as long as there is enough space for them and they will not take away from the aesthetics of the house. If you plan on using a home generator with your solar system, then you won't have to worry about running into any problems that may prevent your system from working properly.

Where should I place my solar panels?

When performance is the most important factor, we recommend placing solar panels on the front of the house, especially on north-facing homes and gable roofs. Two neighbors have solar panels on the front of their homes, which can make the decision easier at times.
