Overview

Who makes portable power units?

Japanese and Korean companies are the most involved in portable power units for electronic devices, and have recently launched a series of products that are mainly based on direct methanol-fuelled PEFC; large-scale commercialization of these devices is planned in the coming years.

Can a supercapacitor be used as a rechargeable power source?

For moderate energy demands in portable electronics, supercapacitors are suitable as rechargeable stand-alone power sources. In conjunction with rechargeable batteries in uninterruptible power supplies, supercapacitors can handle short interruptions and can extend battery life.

What are the advantages of PEFC-based power systems?

For military applications, another advantage of PEFC-based power systems is that they could be easily masked against thermal sensors, while other generation systems operate at higher temperatures and emit much waste heat. Here, cost is not a problem; fuel storage and supply logistics are the main limiting factors.

How much electricity does a laptop use?

This distinction is useful because smaller personal devices – such as cameras and mobile phones – tend to draw about 3 W, while laptops and other large electronics devices can use up to 50 W. Other criteria are also available in the literature.
