

Kathmandu Leaf Energy Storage Power Station Project

Overview

How are pumped storage hydropower schemes distributed in Nepal?

Strip distribution of technically viable pumped storage hydropower (PSH) schemes at different elevation bands (EB1: 0---500 m, EB2: 500---1000 m, EB3: 1000---2000 m, EB4: 2000---3000 m, and EB5: 3000---5000 m above sea level) across Nepal.

How does hydropower contribute to the electric grid in Nepal?

Hydropower energy's contribution to the electric grid in the region is predominantly from the run-of-river hydropower plants . Numerous previous studies have examined run-of-river and storage-type hydropower projects in Nepal , , , , , .

Can a geospatial model predict energy storage capacity across the Nepal Himalayas?

In this study, we configured a geospatial model to identify the potential of PSH across the Nepal Himalayas under multiple configurations by pairing lakes, hydropower projects, rivers, and available flat terrain, and consequently estimate the energy storage capacity.

Why should we study pumped storage systems in Nepal Himalayas?

Nepal Himalayas provide an ideal testbed to study pumped storage systems given high topographic gradients, large flow fluctuations, and prevalent energy demand patterns.
