

Kathmandu solar container lithium battery pack three- dimensional configuration

Overview

What is a three-dimensional multiphysics-based thermal model of a battery pack?

A three-dimensional multiphysics-based thermal model of a battery pack is presented. The model is intended to demonstrate the cooling mechanism inside the battery pack. Heat transfer (HT) and computational fluid dynamics (CFD) physics are coupled for both time-dependent and steady-state simulation.

What is the cooling mechanism inside a battery pack?

The model is intended to demonstrate the cooling mechanism inside the battery pack. Heat transfer (HT) and computational fluid dynamics (CFD) physics are coupled for both time-dependent and steady-state simulation. Inside the battery cells in the pack a lumped value of heat generation (HG), that works as a volumetric heat source, is used.

What are the design parameters of a battery pack?

Various battery pack design parameters (packing type, number of batteries, configuration, geometry), battery material properties, and operating conditions can be varied. Loading.
