How many uninterruptible power supplies (UPS) are there?

This section provides an overview for uninterruptible power supplies (ups) as well as their applications and principles. Also, please take a look at the list of 68 uninterruptible power supply (ups) manufacturers and their company rankings.

What is an ups & how does it work?

An UPS is a device that supplies power to connected devices for a certain period of time in the event of a power failure due to a power failure. It has a built-in battery and supplies power to servers, PC electronic equipment, network equipment, etc. in the event of power failure or power supply trouble, for example.

What are UPS modules with capacitor storage?

UPS modules with capacitor storage are equipped with integrated electrochemical double layer capacitors. In case of a power fault they guarantee an uninterrupted power supply for several seconds. By using such UPS modules, processes can be completed and data saved, for instance.

What is a continuous power supply (UPS)?

UPS is the short version of "uninterruptible power supply". In many applications a continuous power supply is important because power fluctuations and outages can cause damage to control equipment as well as unexpected down time. This situation can lead to a loss of productivity and revenue.
