

Large-scale monitoring UPS uninterruptible power supply with ultra-long battery life

Overview

What is a microcontroller based intelligent uninterruptible power supply (UPS) system?

Working model of microcontroller based intelligent Uninterrupted Power Supply (UPS) system for power management in laboratory is worked upon. The appliances of lab viz. computers, fans, lights are automatically controlled during power failure according to their priority to ensure optimal utilization of UPS power.

What is an uninterruptible power supply (UPS)?

An Uninterrupted Power Supply (UPS) is a critical component in any high availability system. monitored to ensure that it is working properly. In the past, this monitoring has been done manually or monitor the status of UPS batteries and receive real-time alerts if any issues arise. The proposed system.

What is Smart-UPS ultra?

The Smart-UPS Ultra range delivers higher power density in a smaller footprint with flexible mounting — enabling more power, more space and more equipment at the edge. High performance power protection with more power in a smaller footprint — enabling more power, space and IT equipment at the edge.

What is UPS battery monitoring?

In the past, UPS battery monitoring was done manually or through local monitoring systems. However, alerts. The proposed project aims to develop an IoT based monitoring system for UPS batteries, specifically for high availability systems. This system will consist of a network of sensors placed in strategic locations throughout the battery
