

# Lifespan of solar glass

## Overview

---

On average, solar glass can last anywhere from 25 to 30 years. Most manufacturers offer a warranty of around 25 years, which is a good indication of the expected lifespan. How long do solar panels last?

Find out how long solar panels usually last for, how quickly they degrade over time, and what you can do to maximise their lifespan. What kind of home do you live in?

A modern, monocrystalline solar panel usually lasts around 30-40 years, depending on its quality, the conditions it has to endure, and how well it's been maintained.

Are solar glass panels sustainable?

By generating clean, renewable energy, solar glass panels contribute to a reduction in greenhouse gas emissions and a smaller carbon footprint. They align perfectly with sustainable energy goals and are an environmentally responsible choice for energy generation.

What are solar glass panels?

Solar glass panels, often referred to as solar windows or transparent solar panels, represent a groundbreaking advancement in renewable energy technology. Unlike traditional solar panels that are bulky and mounted on rooftops, solar glass panels are integrated directly into windows or building facades.

How long do monocrystalline solar panels last?

Generally speaking, the degradation rate of monocrystalline solar panels is 0.5% per year. This means that, after 30 years, most monocrystalline solar panels on the residential market will produce 87% of their original power output.
