

Metal clad switchgear factory in Monaco

Overview

What is metal-clad switchgear?

A Complete Guide Metal-clad switchgear is an essential part of modern power systems. It plays a key role in ensuring safe, reliable, and efficient distribution of electricity across industrial, commercial, and utility environments. But what exactly is metal-clad switchgear, and why is it widely used in medium and high-voltage applications?

.

What is air insulated metal clad switchgear?

The air insulated metal clad switchgear is designed to feed the overhead line and is usually placed trackside, in an indoor substation, or in a container. By manufacturing both the bus duct and switchgear, we ensure efficient integration of components on site. Our equipment is developed on world-leading design and technology and proven acceptance.

What is air insulated metal clad MCL series switchgear?

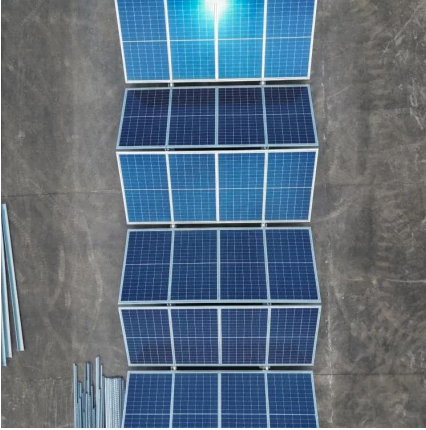

ASTOR branded Air Insulated Metal Clad MCL Series Switchgears are designed according to IEC 62271-200 standard for using up to 40.5kV. It always fulfill the needs with flexible designs which are suitable for the projects. MCL Series Metal Clad Switchgears are produced to be used in places where the maximum service continuity is desired.

What are the advantages of metal clad switchgear?

Metal-clad switchgear offers several distinct advantages that make it the go-to choice for many installations: : Metal enclosures and compartmentalized design reduce the risk of arc flash and electrical faults spreading. : Components like circuit breakers can be withdrawn without dismantling the entire system.
