

# **Off-grid type energy storage container for base stations**

## Overview

---

What is an off-grid energy storage system?

Off-grid energy storage systems are used in localities that are far away from populated areas or cities and not connected to any electricity grid. Carbon emissions from the country's main electricity grid have risen since the end of the carbon tax by the largest amount in nearly eight years.

What is grid-based energy storage?

Grid-based energy storage is a method of storing energy directly for the electrical grid. It addresses the issue of renewable energy sources not always being available, as energy can be stored during sunny and windy periods and released when needed.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO<sub>4</sub>) combined with an intelligent 3-level battery management system (BMS);
