

Open source new energy storage database

Overview

What are open energy system database projects?

Open energy system database projects employ open data methods to collect, clean, and republish energy-related datasets for open use. The resulting information is then available, given a suitable open license, for statistical analysis and for building numerical energy system models, including open energy system models.

Why is energy storage data structure redesigned?

This redesign of the data structure also enables the path for getting the input data from reliable sources through APIs. A subpage on energy storage policies has been created to fill the gap on related policy information. Currently, policy analyses are provided for the United States.

What resources are available for energy storage?

The following resources provide information on a broad range of storage technologies. General Battery Storage, ARPA-E's Duration Addition to electricitY Storage (DAYS), HydroWIRES (Water Innovation for a Resilient Electricity System) Initiative.

What data sources can be used to model China's Energy System?

This document summarizes all key open and publicly available data sources useful for modeling China's energy system. It includes renewable potentials, electricity demand, cost assumptions, energy balances, time-series load, and international databases. All sources are meant for research, modeling, or policy work.
