

Outdoor base station survey specification requirements and standards

Overview

Which survey stations should be connected to a tree survey station?

All Survey Stations (Horizontal and Vertical) and/or Temporary Bench Marks (TBMs) established in the tree survey shall be connected to existing Hong Kong Geodetic survey stations, Permanent Bench Marks (PBMs), or otherwise as specified.

What are the standards of accuracy for a road survey?

Standards of Accuracy: The standards of accuracy for such surveys shall comply with the relevant Standard Specifications for Road and Bridge Works and the relevant Project Specifications. The Surveyor shall ensure that all instruments and equipment used in a survey are in good order and within proper adjustment.

How many base stations should be used?

For setting up own base station, at least two known stations shall be use for checking if only one base station is setup. Two base stations are recommended; For using SatRef RTK correction data, make sure a SatRef reference station is available within 10 km of the area to be surveyed.

What are the requirements for GNSS survey?

For GNSS survey, the requirements on data processing and accuracy standards should be referred to Chapter 4 “Global Navigation Satellite Systems (GNSS) Survey”. All vertical control stations for works shall be surveyed by levelling or height traversing. The level misclosure shall be mathematically adjusted.
