

Paris solar glass model

Overview

Why is patterned glass used in crystalline solar modules?

In the production of crystalline solar modules patterned glass substrates are used in lieu of bare glass. Patterned glass increases the amount of incoming sunlight. Common optical inspection systems for quality assurance and process control are mostly designed for unstructured glass.

Can low-cost PV cells be used for solar control glass?

The development of low-cost PV cells for the production of cost-effective and energy-saving glass systems has been of great interest. Solar control glass which is one of the crucial components of PV panels is largely employed for architectural and automotive windows to lower the sunlight and heat inlet for the comfort.

How can solarinspect ensure the quality of the finished modules?

To ensure the quality of the finished modules, the control of the dimensions and shape (rectangularity) of the glass substrates is essential. SolarInspect provides this capability parallel to the glass defect detection.

How tempered glass is used to generate solar power?

This solar power is being generated by converting sunlight into electricity through Photovoltaics (PV) which is also called as solar cells. Solar cells comprise of many parts from which tempered glass is the one whose high strength acts as a shield for the solar modules by protecting them from mechanical loads and extreme weather conditions.
