

# **Philippines solar solar container energy storage system meets standards**

## Overview

---

How much solar power does the Philippines have in 2024?

As of November 2024, solar power capacity in the Philippines reached 2,551 MW, or 8.6 percent of the total 26,697 MW installed capacity across all technologies, with energy storage systems reaching 634 MW and rooftop solar installations for own-use at 116 MW.

Should solar plants be paired with battery energy storage systems?

Pairing solar plants with battery energy storage systems (BESS) will be the main strategic focus for the country's upcoming renewable energy auction. Each project must have a minimum storage duration of four hours to ensure sufficient grid support and energy reliability.

Can a solar facility be a Pao / COC?

Only solar facilities that are not yet commercially operational and do not have a Provisional Authority to Operate (PAO) or Certificate of Compliance (COC) can be registered to participate. However, existing solar facilities currently facing curtailed operations under their PAO/COC may also qualify.

What is the minimum energy storage system inverter ratio?

Projects must have an energy storage system inverter ratio of at least 0.2 relative to the registered solar capacity and a minimum round-trip efficiency of 85%, as specified by the manufacturer. Round-trip efficiency measures the ratio of energy output during discharge to energy input during charging.
