

# Power battery and battery pack

## Overview

---

What is a battery pack?

A battery pack integrates multiple modules and adds the systems that make the entire solution reliable: high-level BMS, power distribution, protection, and thermal management (air, liquid, or passive). It's the final assembly you install in a car, boat, or energy cabinet.

What are battery cells & modules & packs?

Let's look at some real-world applications where battery cells, modules, and packs play crucial roles. 1. Electric Vehicles (EVs) - Battery Cells: Found in car key fobs and small auxiliary systems - Battery Modules: Power auxiliary systems such as lights, air conditioning, and infotainment.

What is the difference between battery module and battery pack?

**Battery Module:** A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring.  
**Battery Pack:** A complete energy storage system containing one or more modules.

What is the difference between battery cell and battery pack?

**Summary:** Battery Cell: The smallest unit. Battery Module: A group of connected cells. Battery Pack: A complete system with modules and a BMS.  
**Analogy:** Battery Cell: A single brick. Battery Module: A wall made of several bricks. Battery Pack: A building made of multiple walls.
