

Price of power storage batteries

Overview

Battery pack prices for stationary storage fell to \$70/kWh in 2025, a 45% drop from 2024, making it the cheapest lithium-ion category for the first time, according to BloombergNEF (BNEF). From ESS NewsHow much does a battery energy storage system cost?

The battery energy storage system typically accounts for approximately 70% of the total project CAPEX. Recent estimates from KPMG and the World Energy Council suggest the current market value for a battery energy storage total system costs is around £680/kWh (€900-€3500/kWh, or approximately £705/kWh at the bottom end of the estimate).

How much does battery storage cost in 2025?

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power.

How much does battery storage cost in Australia?

For battery storage that's 10GW of 24/7 of new nuclear power station builds each year @ £5B each that last 60 years at zero CO2, if that matters. Put another way, the cost of 1TWh of storage, about 2 day's worth of Australia's energy supply, not new energy, would pay for perhaps 36GW of nuclear capacity at \$5B/GW and 90% duty cycle, etc.

How much does energy storage cost?

Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks. As prices drop and technology gets better, people need to know what causes these changes.
