

# Reykjavik s largest energy storage power station

## Overview

---

What is the largest geothermal power station in Iceland?

The Hellisheidi Power Station is the largest geothermal powerstation in Iceland and the second-largest in the world. The power station is located by Mt. Hengill in Southwest Iceland.

What is the capacity of the largest power station in Iceland?

The largest power station in Iceland has a capacity of 240 megawatts (mw). Other major hydroelectric stations are at Hrauneyjarfoss (210 mw) and Sigala (10 mw). Efforts are underway by the government to export hydroelectric energy to Europe by transporting it via submarine cables.

What makes Iceland a great power plant?

With its strategic location on the Hengill volcanic system—a hotbed of geothermal activity—the power plant capitalizes on Iceland’s natural resources to provide environmentally friendly energy.

How is Reykjanesvirkjun power plant controlled?

The design of the power plant is such that it is generally controlled remotely from a control center in Svartsengi. Unlike the power plant in Svartsengi, Reykjanesvirkjun is only a power plant consisting of two 50 MW dual-flow turbines with sea-cooled condensers, but such a system was a novelty in Iceland at the time when the power plant was built.
