

School uses 200kWh foldable shipping container

Overview

Can shipping containers be used as a classroom building?

When educational institutions need additional square footage, they can convert shipping containers into modular classroom buildings. These structures are an innovative, low-cost, and portable convenient solution for schools to expand when they most need it.

Are shipping container conversions a viable solution for mobile school environments?

Shipping container conversions are gaining popularity as innovative solutions for mobile school environments due to their economic and environmental benefits. The sturdy steel frame of a shipping container classroom makes it durable and capable of weather resistance, ensuring the safety and comfort of students and teachers.

How much does a shipping container classroom cost?

Typically, shipping container structures will cost less than half the price per square foot of traditional construction. It will cost approximately \$150,000 to construct a shipping container classroom with the same area as a 2,000-square-foot traditional classroom.

Why do schools need container classrooms?

Firstly, they offer flexibility. Traditional school buildings can't always accommodate fluctuating student populations or evolving educational needs. But with container classrooms, schools have the ability to expand or decrease their space with ease. They're transportable too, which means they can be relocated to where they're needed most.
