

School uses 40-foot Bahamian folding container

Overview

Are shipping container classrooms worth it?

It's not just about cost savings though. Shipping container classrooms can be set up almost anywhere with level ground. This flexibility makes them perfect for schools expanding their facilities or setting up temporary learning spaces during renovations or emergencies.

How long do shipping container schools last?

When shipping container schools are erected, it's reasonable to anticipate they'll be in use for at least a few months, if not years, and any long-term structure that will be occupied on a regular basis necessitates a foundation able to support the weight of the construction.

Are repurposed shipping containers transforming learning spaces?

We've noticed a significant shift in recent years towards more sustainable, cost-effective building methods and repurposed shipping containers have emerged as a leading contender. These steel boxes that once traversed the globe carrying goods are now being transformed into innovative learning spaces.

What happens if a shipping container school is not laid?

If a weak foundation is not laid, a shipping container school may collapse. If there isn't enough underpinning, it may cause uneven floors and possibly sink into the ground below it.
