

Senegal 180W solar glass

Overview

How much solar power does Senegal have?

The availability of sunny hours per year is around 3,030 for most parts of Senegal, with annual solar radiation of 8.3 kilowatt-hours per square meter per day. ¹² The annual generation per unit of installed PV capacity in Senegal is approximately 1600-1800 KWh/kWp/year. ³.

Will Senegal achieve 100 mw of solar power by 2030?

In Senegal, the country is set to achieve an additional installed capacity of 100 MW of solar, 100 MW of wind, 50 MW of biomass, and 50 MW of Concentrated Solar Power (CSP) by 2030 .

Do solar power plants in Senegal vary over time?

They found that Senegal experiences significant variability in solar resources over time and across different locations, depending on the year and specific site conditions. Niang et al. (2023) evaluated the seasonal performance of six solar power plants in Senegal, namely Bokhol, Sakal, Malicounda, Kahone, Ten Merina, and Mekhe.

Why is solar energy important in Senegal?

Solar energy is central to Senegal's goal of universal electricity access by 2025, especially for rural communities. As solar production decreases, energy poverty could increase, and this could leave rural populations without reliable electricity for socio-economic activities.
