

# Shopping mall uses highly efficient mobile energy storage containers from Western Europe

## Overview

---

Can a shopping centre save energy?

“The majority of European shopping centres are already built, but there is still huge potential for energy savings through regular retrofitting and restyling, with around 4 % of malls undergoing renovation work each year.

Why are shopping centres important in Europe?

The thousands of shopping centres, malls and covered markets dotting the European urban landscape are hubs of economic, commercial and social activity which make a substantial impact on surrounding areas and communities.

How can commonenergy reduce shopping centre energy consumption?

The COMMONENERGY partners implemented numerous distinct technologies, systems and applications capable of reducing shopping centre energy consumption by as much as 75 %. The cost of retrofitting should be recovered in just seven years, and the mall environment enhanced for both retailers and consumers.

Can shopping centres re-conceptualise commercial buildings as lighthouses of energy-efficient architecture?

Shopping centres from Italy to Norway have undergone radical retrofitting as part of an EU-funded project seeking to re-conceptualise commercial buildings as lighthouses of energy-efficient architectures and systems.

## Shopping mall uses highly efficient mobile energy storage containe

### Why Energy Storage Systems Are Becoming Essential for Modern Shopping Malls

The \$12 Billion Problem: How Shopping Malls Waste Energy Daily You know, shopping malls guzzle energy like there's no tomorrow. A typical 500,000 sq.ft mall spends over \$400,000 ...
