

Singapore Energy Storage Distributor

Overview

What is Singapore's first utility-scale energy storage system?

Singapore's First Utility-scale Energy Storage System Through a partnership between EMA and SP Group, Singapore deployed its first utility-scale ESS at a substation in Oct 2020. It has a capacity of 2.4 megawatts (MW)/2.4 megawatt-hour (MWh), which is equivalent to powering more than 200 four-room HDB households a day.

What is Singapore's solar energy system (ESS)?

Built across two sites on Jurong Island, our ESS enhances Singapore's grid resilience by mitigating the impact of solar intermittency as the republic progresses towards achieving its 2030 solar target of at least 2GWp and energy storage systems deployment of 200MWh beyond 2025.

Why should you install ESS / solar battery systems in Singapore?

This gives you greater energy control, cost savings, and reliability across any site type in Singapore. Integrating an ESS / solar battery system offers numerous advantages: Use more of the clean energy generated by your own solar panels instead of exporting it.

What is a battery energy storage system?

A battery energy storage system (BESS) is like a large, smart industrial scale power bank. This energy storage system captures power from various sources like generators, grid and renewables (like solar) and holds it in a high-capacity containerised energy storage system.
