Overview

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

Do solar panels need an inverter?

Solar panels can work without an inverter if the devices they power use DC. However, to use solar-generated electricity for standard household appliances, which typically run on AC, an inverter is necessary to convert DC from the panels into usable AC. Why do we need a solar inverter?

Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use. Without a solar inverter, the energy produced by solar panels would be largely unusable for standard appliances and electronics. [How Does a Solar Inverter Work?](#)

How does a solar inverter work?

The inverter intelligently manages power from your solar panels, a home battery, and the grid. You can program it to follow a priority list—for example: Power the home directly from solar. Use excess solar to charge the battery. Once the battery is full, export excess to the grid. At night, run the home from the battery.
