

# Solar Wireless Outdoor On-site Energy

## Overview

---

What are solar-powered WiFi access points?

Solar-powered WiFi access points offer a robust foundation for solar powered internet. It involves efficient solar energy management and the smart capabilities of IoT solar panels. The development of this technology opens doors for a more connected, greener world, empowers communities, and closes the digital gap.

Are solar-powered Wi-Fi hotspots a natural resource in rural areas?

Connectivity may not be a natural resource in rural areas, but sunlight definitely is. Our partner, Bartech, implements self-sufficient, solar-powered Wi-Fi hotspots using Teltonika's RUT956 mobile router. These Wi-Fi hotspot stations utilise a solar panel connected to a battery and charge controller to generate, store, and manage solar energy.

How do solar-powered Wi-Fi hotspots work?

Our partner, Bartech, implements self-sufficient, solar-powered Wi-Fi hotspots using Teltonika's RUT956 mobile router. These Wi-Fi hotspot stations utilise a solar panel connected to a battery and charge controller to generate, store, and manage solar energy. Also connected is an IoT controller, which collects power efficiency data.

How can solar powered WiFi access point improve digital inclusiveness?

This approach reduces the demand for carbon and extends internet access to underserved and remote areas, where conventional power grids are often out of reach. Solar powered Wifi access point shows the way toward digital inclusiveness.
