

# Solar home grid-connected inverter

## Overview

---

How does a grid connected solar inverter work?

The grid-connected solar inverter operates according to a simple basic electrical theory. From a higher potential to a lower potential, the current flows. The grid-connected solar inverter attempts to keep its output voltage greater than the grid voltage. Net current flow from solar to the grid is the result of this.

What is a grid tied inverter?

A grid-tied inverter, also known as a grid-connected or on-grid inverter, is the linchpin that connects your solar panels to the utility grid. Its primary function is to convert the direct current (DC) electricity generated by your solar panels into alternating current (AC) electricity that can be used to power your home or business.

What is a grid connected solar system?

A grid-tied solar system has a special inverter that can receive power from the grid or send grid-quality AC power to the utility grid when there is an excess of energy from the solar system. Figure. Grid-Connected Solar Photovoltaic System Block Diagram.

Should you use a grid-tied solar inverter?

You will always experience some advantages when using a grid-tied solar inverter compared to other solar panel systems. Rather than a hybrid system with a battery, this is way cheaper. This system needs only a few pieces of equipment so the initial cost is always low. This will meter the surplus power which you can sell to the grid.
