

Solar inverter payment time

Overview

How long does it take a solar system to pay off?

The average solar payback period for EnergySage customers is currently just over seven years. However, without the federal tax credit, that same system would take over 10 years to pay for itself. Here's what you need to know about how long it's likely to take you to break even on your solar energy investment—and why timing matters.

How much does a solar inverter cost?

Here's an estimated replacement cost for a solar inverter: String inverters are the more affordable option for PV system owners to consider. This type of inverter operates by gathering DC from a sequence of solar panels, known as a 'string'. The solar inverter replacement cost generally ranges from R10,000 to R30,000.

How long does it take to replace a solar inverter?

Replacing a solar inverter can typically take a few hours (1–2 hours). The exact time depends on the complexity of the system, the inverter's accessibility, and whether any additional updates to the system are required.

How long does a solar inverter last?

The need for solar inverter replacement is typically signaled by a decrease in the energy output of a solar PV system or operational issues that indicate inefficiency or failure. While most inverters have a lifespan of about 5 to 10 years, their longevity can be extended up to 15 years with high-quality equipment and regular maintenance.
