

# Solar panel power plant in Laos

## Overview

---

A 1,000-megawatt solar power project in northern Laos' Oudomxay Province has reached 60 percent completion and is scheduled to begin operations by the end of 2025, according to provincial governor Bounkhong Lachiemphon. Can China and Laos collaborate on a solar power project?

In what is the first large-scale solar photovoltaic project in Laos, CGN will collaborate with more than 70 Chinese and Laotian enterprises to establish a benchmark for electricity cooperation under the Lancang-Mekong Cooperation framework. The clean energy base is a vital power source supporting China-Laos power interconnection.

How will Lao power plant work?

It was reported the power plant will generate 1,000 megawatts (MW) of power and will be powered by coal. The article also reported that the plant will use "domestically-extracted fuel sources", while "adding value to local natural resources". The Lao government has approved for a feasibility study to be carried out for the project.

How many power plants are there in Laos?

There are currently 42 operational power plants in Laos. The country plans to achieve an installed capacity of 14,000MW by 2020, and to install 54 more electricity transmission lines and build another 16 substations to support this growth.

What is the potential of solar power in Lao PDR?

Lao PDR has an average of 200-300 sunlight days per year, with more sunlight days in the south. The potential capacity of solar power is estimated at around 4.5-5.0 kilowatt-hours (kWh) per square meter (m<sup>2</sup>) per day. Solar power has the potential to play a major role in providing off-grid electric power for remote rural areas.
