

Solar panels can be mixed

Overview

Can you mix solar panels?

Technically, you can mix solar panel sizes regardless of whether you connect them in parallel or in series. The bigger panels will just waste the output that is greater than the smallest panel. Sometimes the bigger panel will push through the bypass diode and the smaller panel doesn't contribute at all.

What happens if you mix different wattage solar panels?

Mixing different wattage solar panels affects how well they work together and the amount of power they make. If the panels don't match in wattage, voltages and amperages will be different too. This can make the whole solar power system work less effectively.

Can you mix different solar panels in parallel?

Yes, you can mix different solar panels and connect them in parallel. This is often the best way to ensure that each panel operates at its optimal voltage, resulting in more electricity generation overall.

Wiring Solar Panels of Different Ratings in Parallel
Mixed Wiring of Solar Panels
A combination of series and parallel connection is also possible. Indeed, this depends on the maximum possible total output voltage and maximum possible total output current of the solar array, which are limited by the maximum input voltage and the maximum input current of your charge controller (for off-grid systems) or inverter (for grid-tied systems).
