

# **Solar panels directly connected in parallel with batteries**

## Overview

---

Why do solar panels and batteries need to be connected in parallel?

This parallel wiring method is essential for 12V systems, including 12V charge controllers and inverters. Therefore, two or more solar panels and batteries (each rated at 12V DC) are connected in parallel to maintain system voltage while increasing current capacity.

How do you wire a solar panel with a battery?

The 12V system is the most common solar panel wiring configuration used with batteries for small load residential application. Typically, to achieve a 12V DC to 120V/230V AC system, both the photovoltaic (PV) panels and batteries are connected in parallel.

How do I connect two solar panels & batteries in parallel?

To connect two or more solar panels and batteries in parallel, simply connect the positive terminal of one panel or battery to the positive terminal of the other, and the negative terminal to the negative terminal, as shown in the diagram below. In the following wiring diagram: Two 12V, 10A, 120W solar panels are connected in parallel.

Should solar panels be connected in parallel?

Similarly, using two solar panels connected in parallel will result in faster battery charging and the ability to support more load. This parallel wiring method is essential for 12V systems, including 12V charge controllers and inverters.
