

Solar panels for solar power generation

Overview

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels.

What is solar photovoltaics (PV)?

Solar photovoltaics (PV) is a very modular technology that can be manufactured in large plants, which creates economies of scale, but can also be deployed in very small quantities at a time. This allows for a wide range of applications, from small residential roof-top systems up to utility-scale power generation installations.

What are the different types of solar energy?

Learn about the basics of solar radiation. There are two main types of solar energy technologies—photovoltaics (PV) and concentrating solar-thermal power (CSP). You're likely most familiar with PV, which is utilized in solar panels. When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel.

How does solar energy generation work?

Solar energy generation follows a structured process to transform sunlight into usable electricity. This process involves several essential steps, starting with Photovoltaic (PV) cells within solar panels absorbing sunlight.
