

Solar power station cost per watt

Overview

How much does solar cost per watt?

According to the Solar Energy Industries Association, the average price per watt for residential solar projects was \$3.27 in the first half of 2023. That is up slightly from a low of \$2.92 before the pandemic, but down over 50% from the price of \$6.65 per watt in 2010. Knowing the price per watt of solar is good for two things.

How much does a solar system cost?

Residential and commercial installations have distinct price ranges due to differences in energy demands, system sizes, and design complexities. Residential solar installations typically cost between \$2.50 and \$4.00 per watt. Factors like roof type, system size, and local labor prices drive these variations.

What is the cost per watt?

By analyzing the cost per watt, homeowners and businesses can make informed decisions that align with their financial goals and energy needs. To begin with, the cost per watt is a fundamental metric that reflects the price of solar panels divided by their total output capacity in watts.

How do you calculate solar cost per watt?

Calculating solar price per watt is pretty simple. Simply divide the cost of the system (in dollars) by the size of the system (in watts). $PPW = \text{System cost} / \text{System wattage}$ Now, solar systems are typically sized in kilowatts (kW), so you'll have to multiply by 1,000 to convert to watts.
