

Solar power station power inverter

Overview

What is a photovoltaic inverter (PVI) station?

It is based on the same best-in-class power conversion platform as our AMPS solutions, enabling greater scalability and flexibility. Hitachi Energy's Photovoltaic Inverter (PVI) station provides you with advanced control and power capabilities that are designed to meet complex technical requirements and the most challenging grid codes.

Which inverter is best for a medium voltage power station?

The Sunny Central UP is our most powerful inverter with up to 4600 kVA and is the heart of the Medium Voltage Power Station. At a voltage of 1500 V DC it allows for significantly higher efficiency in system design. With a variety of options and the new DC-coupling readiness it provides maximum flexibility at minimum size.

What is solar inverter based generation?

As more solar systems are added to the grid, more inverters are being connected to the grid than ever before. Inverter-based generation can produce energy at any frequency and does not have the same inertial properties as steam-based generation, because there is no turbine involved.

How do inverters provide grid services?

In order to provide grid services, inverters need to have sources of power that they can control. This could be either generation, such as a solar panel that is currently producing electricity, or storage, like a battery system that can be used to provide power that was previously stored.
