Overview

Are off-grid solar PV systems feasible in South Asia?

These findings align with Baurzhan and Jenkins and Sun et al. , who explored the feasibility of off-grid solar PV systems in South Asia, emphasizing factors like cost-effectiveness, affordability, financing, environmental impact, and poverty alleviation.

Can off-grid solar PV be a game-changer for rural electrification in South Asia?

Off-grid solar PV emerges as a game-changer for rural electrification and a catalyst for sustainable agricultural development in South Asia. Governments and development agencies can prioritize investments in solar PV systems to address energy poverty and boost agricultural productivity. 1. Introduction.

Are solar home systems a viable alternative to the National Grid?

Renewable energy, like solar home systems (SHS), can fuel both economic growth and agricultural development, tackling the dual challenge of limited resources and poor energy access [82, 80]. Notably, SHS outperform the national grid in service quality, making them a potent solution (Groh et al., 2016).

Does off-grid solar PV improve rural energy access?

In this regard, the first model analyzes whether off-grid solar PV improves rural energy access, measured by electrification rates. Our results reveal a significant positive impact, demonstrating the potential of solar PV in addressing energy deficits. The second model investigated the link between rural electrification and agricultural production.
