

South Tarawa backup UPS uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

What is a 10kVA ups?

Uninterruptible Power Supply, 10kVA/8kW, line interactive UPS, provides a reliable battery backup for critical devices like PC, servers, networks against power surges and outages. High reliability yet low cost 10kVA UPS is available with input and output voltages of AC 220V/120V for choice.

How does a ups protect a device from sudden power failure?

An uninterruptible power supply (UPS) protects valuable devices from sudden power failures by providing backup power during power outages. This ensures a steady power supply to connected devices.

How does a UPS work?

A UPS works by detecting power failures or fluctuations and instantly switching to battery power. It converts AC power into DC power to charge its batteries and then back into AC for connected devices. When electricity is restored, it recharges the batteries.
