## Overview

---

What is container energy storage temperature control system?

The proposed container energy storage temperature control system integrates the vapor compression refrigeration cycle, the vapor pump heat pipe cycle and the low condensing temperature heat pump cycle, adopts variable frequency, variable volume and variable pressure ratio compressor, and the system is simple and reliable in mode switching.

What is the operation mode of energy storage battery?

When the energy storage battery operates in charging/discharging mode, the operation mode is VCRM for the proposed temperature control system when the outdoor temperature is greater than 20 °C. And the operation mode is switched to VPHPM when the outdoor temperature is greater than or equal to 20 °C.

What are the different types of energy storage applications?

Energy storage applications can typically be divided into short- and long-duration. In short-duration (or power) applications, large amounts of power are often charged or discharged from an energy storage system on a very fast time scale to support the real-time control of the grid.

What is the COP of a container energy storage temperature control system?

It is found that the COP of the proposed temperature control system reaches 3.3. With the decrease of outdoor temperature, the COP of the proposed container energy storage temperature control system gradually increases, and the COP difference with conventional air conditioning gradually increases.
