

Syria 3 million kilowatts of wind solar and storage

Overview

Damascus: The Ministry of Energy of the Syrian Arab Republic and ACWA Power, the world's largest private water desalination company, a leader in the global energy transition, and a first mover in green hydrogen, announced the signing of a Joint Development Agreement (JDA) to study develop approximately 2.5 GW of solar and wind capacity — alongside energy storage and a proposed national technical training centre — in the Syrian Arab Republic. How much solar energy will Syria have by 2030?

The Syrian Minister of Electricity unveiled an ambitious plan to introduce up to 2,500 megawatts of solar energy and 1,500 megawatts of wind power by 2030, alongside the installation of 1.2 million solar water heaters. However, Syria's complex economic conditions present a major obstacle to achieving these targets.

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

Can Syria match all-purpose energy demand with wind-water-solar (WWS)?

This infographic summarizes results from simulations that demonstrate the ability of Syria to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, storage, and demand response continuously every 30 seconds for three years (2050-2052).

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

Syria 3 million kilowatts of wind solar and storage

[SCIO briefing on white paper 'China's Energy Transition'](#)

Aug 29, 2024 · By the end of July this year, China's installed capacity of wind power reached 471 million kilowatts, and that of solar power reached 735 million kilowatts, resulting in a combined ...
