

Tajikistan Energy Storage Grid Connection Project

Overview

Can Tajikistan's solar power be harnessed to meet energy-policy goals?

In addition to hydropower, Tajikistan's significant solar power potential could be harnessed to meet several energy-policy goals simultaneously, and the government has recently set a target for renewable energy to provide 10% of generating capacity by 2030.

How can Tajikistan improve its energy system resilience?

Tajikistan seeks to enhance its energy system resilience by reconnecting to the United Energy System of Central Asia. This effort is supported by large infrastructure projects of common interests, such as CASA-1000 and the Rogun Hydropower Plant Project.

How will electricity exports benefit Tajikistan?

Profits from electricity exports will contribute to the financial recovery of the Tajik national power utility company, allowing Tajikistan's electrical utilities to reconstruct existing power infrastructure and attract financing for construction of new generation and transmission infrastructure.

Why should Tajikistan invest in hydropower?

In addition to its vast hydropower export potential, Tajikistan's hydrogen production potential and reserves of critical raw materials, such as manganese, lead, aluminum and zinc, should be leveraged to enable Tajikistan's energy transition and to generate novel export revenue streams.

Tajikistan Energy Storage Grid Connection Project

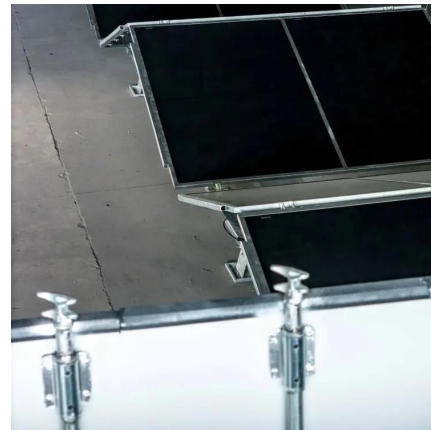

[Tajikistan grid-side energy storage project](#)

The project also includes a hybrid energy storage power plant rated for 180-kilowatt hours. The new solar plant is a direct result of successful cooperation between the Government of ...
