

# Telecom lithium iron phosphate battery site cabinet capacity

## Overview

---

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What is a lithium iron phosphate (LiFePO<sub>4</sub>) battery?

Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries are a type of lithium-ion battery with a lithium iron phosphate cathode and typically a graphite anode. Compared to traditional lead-acid batteries or other lithium-ion batteries (such as ternary lithium batteries), LiFePO<sub>4</sub> batteries offer several notable advantages:.

How to eliminate safety risks of lithium batteries at telecom sites?

Manufacturing high-quality lithium batteries is the only way to eliminate safety risks of lithium batteries at telecom sites. The telecom industry shall strengthen the supervision and control over the quality of lithium batteries and promote the development of dedicated safety standards and technical specifications.

What are the different types of batteries for telecom sites?

There are various types of batteries for telecom sites, including the lead-acid battery and lithium-ion battery. These types of batteries may differ in energy density, charge and discharge efficiency, as well as service life. Figure 1 Battery business panorama for telecom sites Figure 2 Lead-acid battery and lithium-ion battery
