

Tender for Antananarivo power base station project

Overview

Does Antananarivo need a new power transmission line?

The availability of a new power transmission line between the country's two main interconnected grids - Antananarivo (RIA) and Toamasina (RIT) - is a necessary condition for the integration of major hydropower developments on the drawing board such as Volobe (120 MW) and Sahofika (192 MW).

Why should Madagascar upgrade its hydropower?

By upgrading its hydropower, Madagascar will also reduce its dependence on fossil fuels, the import costs of which have a significant impact on the economy and JIRAMA's financial viability. The project will be implemented over 48 months, with the main works completed in Q4-2023.

How many substations will be built in Ambohibary?

Besides the power line, the project also includes the construction of 4 substations (Tana Nord II, Ambohibary, Antsampanana and Toamasina), which will strengthen RIA and RIT and ensure power distribution in the rural areas crossed.

What will prirtem-1 do for Madagascar?

PRIITEM-1 will enhance the development and integration of renewable energy at a lower cost and render power supply more reliable in Madagascar's two largest cities, in addition to providing access to power in a rural area with high agro-industrial and mining potential.
