

The prospects of distributed energy storage in Ho Chi Minh City Vietnam

Overview

Do energy storage systems exist in Vietnam's power system today?

This paper provides an up-to-date review of these storage technologies and energy storage systems in Vietnam's power system today. Finally, there are a few perspectives on the opportunities and challenges of these storage systems in Vietnam power systems today.

Can energy storage help Vietnam meet climate goals?

Co-funded by a grant from U.S. Mission Vietnam, the pilot project will demonstrate how energy storage can help Vietnam integrate more renewable energy into its power system to meet ambitious climate goals.

What is the current status of Vietnam's power system?

(i) Current status of Vietnam's power system with high RE (solar and wind power) rate, and the capacity of RE projects is greatly fluctuated. (ii) Advantages and disadvantages of operating a power system with a high RE rate. (iii) Demand and necessity of electricity storage in the current and future power system of Vietnam.

Is energy storage system a good investment?

According to international energy experts, when RE electricity rate reaches 15% up, the investment in energy storage system is economically efficient. So, in many countries over the world, the energy storage systems have become the necessary technologies in demand side management, RE and smart grid development.
