

# **The world s first liquid flow battery manufacturer**

## Overview

---

Who is Yinfeng new energy in flow battery manufacturers in China?

Yinfeng New Energy in flow battery manufacturers in China focuses on the R&D, manufacturing and commercial application of new high-power and large-capacity energy storage products - vanadium redox battery energy storage systems.

Are flow batteries the future of energy storage?

Flow batteries, with their ability to create a more stable grid and reduce grid congestion, are considered a promising technology for energy storage. Their adoption is closely linked with the surging energy storage market and can help fill renewable energy production shortfalls.

What are the typical chemistries used in flow batteries?

Typical flow battery chemistries include all vanadium, iron-chromium, zinc-bromine, zinc-cerium, and zinc-ion. A flow battery is an electrochemical cell that converts chemical energy into electrical energy as a result of ion exchange across an ion-selective membrane that separates two liquid electrolytes stored in separate tanks.

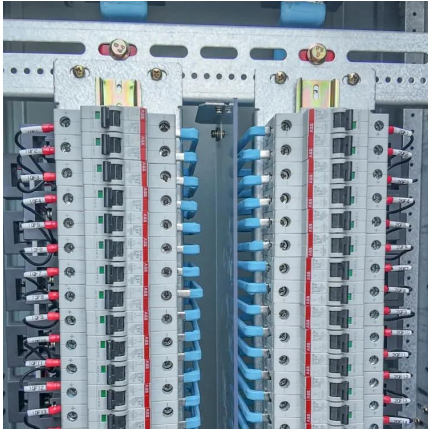

What is Xinjiang's longest-duration flow battery?

The 200MW/1GWh vanadium flow battery system, built with the participation of Dalian Rongke Power Co., Ltd., marks a historic milestone — ushering in the GWh era for flow battery technology. With a maximum energy storage duration of 5 hours, the project sets a new benchmark as Xinjiang's longest-duration flow battery energy storage facility.
